TOURBILLON ORBITAL

CALIBRE IO200 BY CHRISTOPHE CLARET

OWNER'S MANUAL

OWNER'S MANUAL

The Jean Dunand Tourbillon Orbital is a wristwatch of original design and construction in which the entire movement rotates, carrying in orbit a one-minute flying tourbillon on a revolving dial.

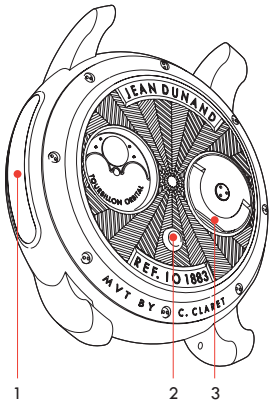
The patented calibre IO200 presents two features new to watchmaking:
a power-reserve gauge shown through an aperture in the caseband, and the winding and setting system through the central axis of the rotating movement. Additionally, the phases of the moon are displayed on the back of the watch.

The watch bears the name of the Swiss artist Jean Dunand (1877-1942), who was influential in the Art Deco movement in Paris. The name designates original complicated watches of advanced design built in the Christophe Claret workshops in Le Locle, Switzerland.

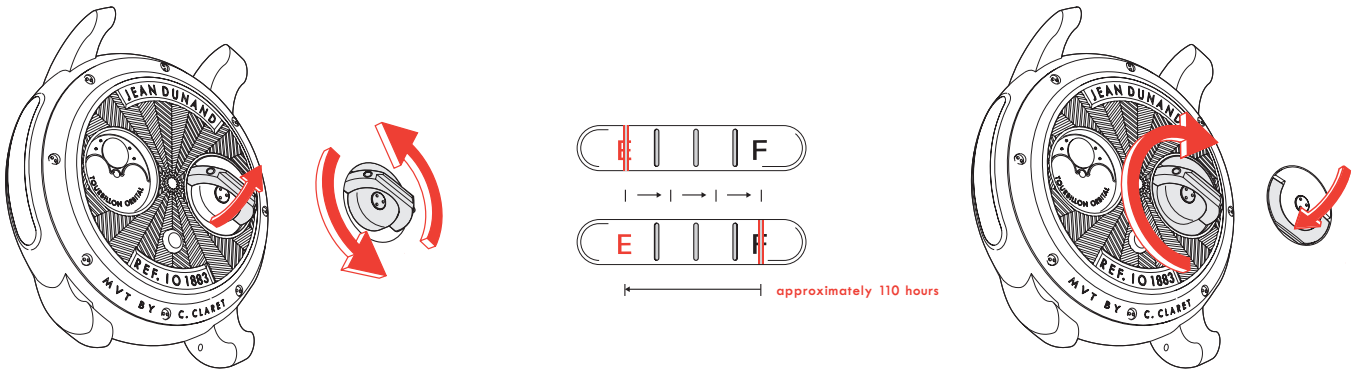
OPERATING INSTRUCTIONS

The Jean Dunand Tourbillon Orbital is the first watch of its kind. It features a movement constructed on all new principles and a winding and setting system unlike that of conventional wristwatches.

Please follow these instructions carefully when you wind or set your watch.
Misuse may damage the mechanisms.



1 Power-reserve gauge
2 Pushbutton to set the moon phase
3 Folding handle to wind and set the watch



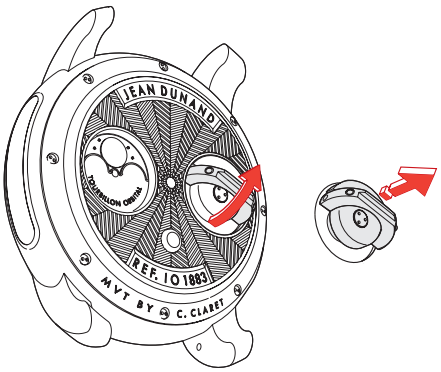
_A_ _B_ _C_

WINDING YOUR WATCH

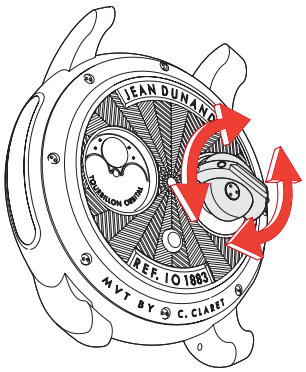
_A_
Lift the handle on the back of the watch.
Turn it **counterclockwise** to engage the winding mechanism and to wind the watch.

_B_
While you wind the watch, the power-reserve gauge on the side of the watch will move in steps from E (empty) to F (full). Stop winding when the gauge reaches F (full).
The watch has a slipping mainspring that does not lock when it is fully wound.
When it is fully wound, the watch will have a power-reserve of approximately 110 hours.

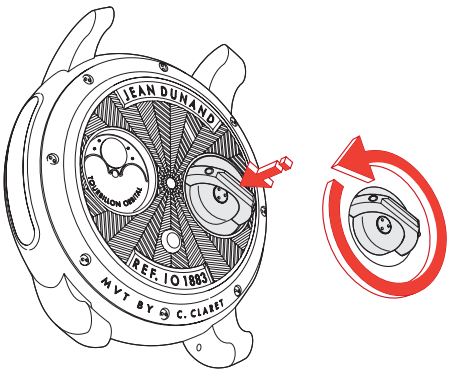
_C_
Please note: Before you fold down the handle, give it a half-turn **clockwise** to disengage the winding mechanism.
The watch will stop unless the winding mechanism is disengaged.



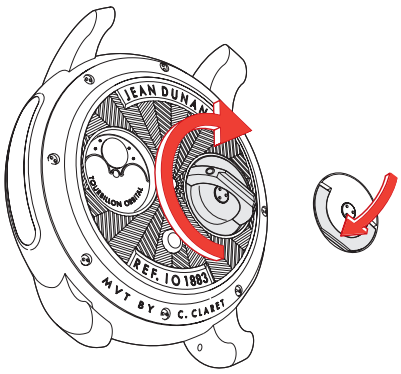
_D_



_E_



_F_



_G_

SETTING THE TIME

_D_
Lift the handle and pull it up one click.

_E_
Turn the handle in either direction to bring the hands to the correct time.
Setting the time might cause a slight shift in the dial and movement assembly.
This has no effect on timekeeping.

_F_
After you have set the time, click the handle down to the winding position,
and give it one turn **counterclockwise**.

_G_
Please note: Before you fold down the handle, give it half a turn **clockwise**
to ensure that the setting and winding mechanisms are disengaged.
Failure to disengage the mechanisms will cause the watch to stop.

SETTING THE PHASE OF THE MOON

_H_

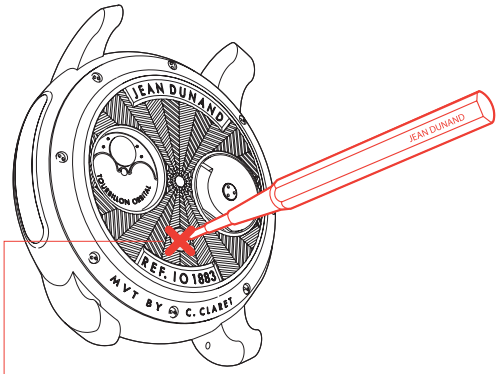
Warning: Do not change the phase of the moon while the watch shows a time between 11:00 and 3:00.
The mechanisms automatically engage to advance the moon at midnight
and any manual intervention between 11:00 and 3:00 may damage the watch.

If necessary, set the hands to show a time after 3:00 (see SETTING THE TIME),
set the phase of the moon and then reset the time.

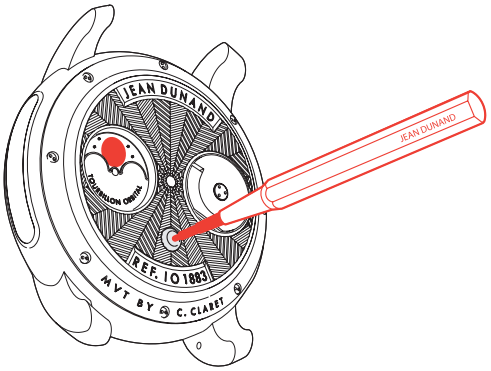
_I_

Please note: Use only the stylus provided to press the pushbutton.
Any other implement might damage the pushbutton.
The moon advances one day each time you press the pushbutton.

To bring the moon to the right phase, first advance the moon by pressing the pushbutton
until the moon appears full in the aperture.
Then press the pushbutton once for each day since the last full moon.



_H_



_I_

Do not change the phase
of the moon while the watch shows
a time between **11:00 and 3:00**.

TAKING CARE OF YOUR WATCH

Each Jean Dunand watch is individually made to the highest standards of manufacture, and has been thoroughly tested before delivery.

The Tourbillon Orbital watch is designed for daily wear and to run continuously. **However, it is not suitable for any activity that might subject it to violent shocks.**

Like any high-precision machinery, the movement of the watch needs regular cleaning, oiling and adjusting. We recommend you have it serviced every three years to ensure its indefinite operation and lasting value.

The Tourbillon Orbital watch can only be serviced or repaired in the workshops of Christophe Claret SA. Intervention on the watch by any other person will invalidate Jean Dunand's guarantee.

If your watch needs service or repair, please return it to the authorized retailer where you bought it or to WPW S.A. in Geneva, with its valid warranty certificate.
If you send your watch by post or courier, please ensure it is securely packaged, fully insured, and accompanied by its warranty certificate.
